 8 Semi-important fixes

Wondering how well your website is performing? Here you can check your website against the major SEO parameters and see whether your site has the proper WWW redirect, SEO and user-friendly URLs with trailing slashes, functional robots.txt file, XML sitemap, duplicate content, etc. Take advantage of the website health check to eliminate all possible errors, and follow our recommendations on how to increase your search engine visibility.

 **WWW redirect**

This option checks whether your website runs with www or without www in order to avoid the usage of duplicate content.

✓ URL rewrite

Make sure to rewrite your URLs that will help users and search engines see clear and clean URLs. Your website's URLs shouldn't contain vague elements that will make them difficult to read. All URLs should be clean and clear for users. With SEO Friendly URL it is easy to rank your website in search engines and share different articles with clear URLs in social media. Don't use underscores in your URLs.

✓ Trailing slashes

If you use the trailing slashes at the end of the URL it makes it pretty and clear, while the URL without slash will look quite weird.

✓ Redirects HTTP traffic to HTTPS

HTTPS is a guarantee of user data protection (including payment details), as well as a good ranking signal for search engines. In 2016, Google officially [announced](#) that since January 2017 a secure communication will become the official algorithm. So, sites on HTTP will gradually lose their positions.

✓ Robots.txt

Robots.txt file helps to restrict access for the selected search engine robots and prevent them from indexing specific pages or the whole of the website. Robots.txt file contains the link to the XML sitemap file that helps search engine crawlers to discover and index the maximum number of the website's pages.

✓ XML sitemap

You should specify the change frequency for each URL, time when you have made the last changes and the importance of the URLs. You will help search engines to crawl the site easily and intelligently.

✓ No flash

Optimizing your content for search engines, we recommend you to avoid Flash as much as possible. It is better to use Flash for specific enhancements as search engines can't index properly Flash content.

⚠ No frame

Try not to use frames on your website as search engines can't index or crawl your website content via them.

Avoid the use of frames on your web pages as much as possible and use the [NoFrames tag](#) on website.

✓ Common homepage variations

Make sure that your website content doesn't have multiple URLs as Google will consider it as duplicate content.

Usability and technologies

✖ 0 Important fixes

⚠ 1 Semi-important fixes

This section covers usability and technical requirements that apply to a properly functioning website. Start from checking whether your website has a favicon in its place, valid markup and custom 404 error page. Also check your website loading and running speed as it directly affects the rankings, and test whether it's secure for browsing.

✔ Favicon

Make sure that you have a favicon for your website and it is consistent with your brand. The favicon should give your website a professional look, an easy identification and branding.

✔ Custom 404 page

Use a [Custom 404 page](#). If you correctly create your Custom 404 page, it will help people find all proper content, provide other useful information and encourage them to stay your website further.

✔ Safe browsing

Try to avoid phishing and malware for your website. You can make your website work safe with [Google Safe browsing](#).

⚠ W3C HTML validation

Make sure that you use valid markup that doesn't contain HTML errors. With syntax errors you make your page difficult to get indexed by search engines.

You can check website errors with [W3C validation service](#) and make sure your website meets the web standards.
