Web archive age:	Jun-30 2008
PR:	0
MozLinks:	26
MozDomainAuthority:	48
Alexa Rank:	240962
DMOZ Listing:	No
G Pages Indexed:	127

-  379 Crawled pages
-  1603 Passed Checks
-  10 Important Fixes
-  894 Semi-Important Fixes

Health Check

✔ DNS configuration

Domain name with www and without www should be resolved to the same IP address.

✔ WWW redirect

This option checks whether your website run with www or without www in order to avoid the usage of duplicate content.

✔ URL Rewrite

Make sure to rewrite your URLs that will help users and search engines see clear and clean URLs. Your website's URLs shouldn't contain vague elements that will make them difficult to read. All URLs should be clean and clear for users. With SEO Friendly URL it is easy to rank your website in search engines and share different articles with clear URLs in social media. Don't use underscores in your URLs.

✔ Trailing slashes

If you use the trailing slashes at the end of the URL it makes it pretty and clear, while the URL without slash will look quite weird.

✔ Robots.txt

Robots.txt file helps to restrict access for the selected search engine robots and prevent them from indexing specific pages or the whole of the website. Robots.txt file contains the link to the XML sitemap file that helps search engine crawlers to discover and index the maximum number of the website's pages.

✔ XML sitemap

It is important to create [XML sitemaps](#) in order to help search engines crawl your website. After submitting your Sitemap to the search engines, we recommend you to get the feedback how to improve it. You can generate XML sitemaps for URLs, images and videos, news and mobile content.

You should specify the change frequency for each URL, time when you have made the last changes and the importance of the URLs. You will help search engines to crawl the site easily and intelligently.

✔ No Flash

Optimizing your content for search engines, we recommend you to avoid Flash as much as possible. It is better to use Flash for specific enhancements as search engines can't index properly Flash content.

No Frame

Resolve

Don't use frames on your web pages as much as possible and use the [NoFrames tag](#) on website.

✓ 0 Pages with duplicate rel="canonical" code

Content Analysis

Keep in mind that unique content plays a vital role in search engine results. Your website structure should

include HTML headings (h1-h6). Try to use important keywords in your headings. The tag H1 must have the most important keywords. Don't use [duplicate content](#) for your heading tags. The best variant is to use just h1-h3.

Write only unique content, no duplicate and rewritten content. Keep your content with 400 words and more. Too long articles are not good either. It is better to keep the happy medium. Try to minimize a number of spelling and grammar mistakes.

✔ 0 Pages with duplicate content

! 6 Pages with a low word count < 250

- <http://www.intellectsoft.net/case-studies>

Links Analysis

Make sure you have no more than 100 external links per each page. Try to link only to quality website. Use [Nofollow tag](#) for external links if you don't want to show unsolicited links to search engines. Optimize the anchor text of your links with important keywords. Avoid keyword stuffing. Don't use too spammy links for your website. Analyze the structure of your interlinking here: [Google Search Console: Search Traffic > Internal links](#).

✔ 0 Pages with too many outgoing links > 100

! 160 internal links with missing anchor

Optimization

Mobile

 **Mobile-friendly**

 **Eliminate render-blocking JavaScript and CSS in above-the-fold content**

 Leverage browser caching

 Reduce server response time

 Minify HTML

 Prioritize visible content

 Optimize images

 Avoid app install interstitials that hide content

 Avoid landing page redirects

 Minify JavaScript

 Use legible font sizes

 Enable compression

 Minify CSS

 Configure the viewport

 Links placement

 Mobile viewport

 Content size

 Plugins compatibility

 Text size

Size content to viewport

Avoid plugins

Size tap targets appropriately

✔ Optimize images

Usability and Technologies

✔ Favicon

Make sure that you have a favicon for your website and it is consistent with your brand. The favicon should give your website a professional look, an easy identification and branding.

Resolve

Create a perfect logo for your website and use free favicon generators like favicon.cc or favicon-generator.org. Make the generation with 16×16 pixels and upload the favicon file in your root directory with the .ico format.

✔ Custom 404 page

Use a [Custom 404 page](#). If you correctly create your Custom 404 page, it will help people find all proper content, provide other useful information and encourage them to stay your website further.

A 404 page is an error message that a user sees when trying to follow a non-existing page on your website (for example, if this page is deleted or you've mistyped URL). The standard 404 page can differ from your ISP and it usually doesn't contain any helpful information, that's why many people are used to leave this website.

✔ Website Speed avg: 597 ms

It is important to have a fast [website speed](#) as it has a great impact on your website ranking. Good website speed will bring you more visitors and reward you with high conversion rates.

Resolve

Optimize your website loading time: image size, image file format, no text graphics, unnecessary plugins, caching, use JavaScript at the end of the document, no redirects, unnecessary CSS and HTML, no multiple tracking scripts, G-zip encoding, cache-control headers, the reduction of cookie size and CMS software update.

 **Safe browsing**

Try to avoid phishing and malware for your website. You can make your website work safe with [Google Safe browsing](#).

 **W3C HTML Validation**

Make sure that you use valid markup that doesn't contain HTML errors. With syntax errors you make your page difficult to get indexed by search engines.

Errors: [51](#), warnings: [25](#)

Resolve

You can check website errors with [W3C validation service](#) and make sure your website meets the web standards.

 **W3C CSS Validation**

It is not vital but it is better to check CSS validation to define your code works well or track real errors that you have missed.

Errors ([29](#)) Warnings ([214](#)) Validated CSS

Resolve

Check your cascading stylesheets [here](#).
